WORK EXPERIENCE

Software Engineer

August 2022 - present

WebPt, Phoenix, AZ/Remote

- Build and maintain responsive, user-friendly interfaces using React and TypeScript.
- Design and implement scalable back-end services using Node.js, Express, SQL, AWS, and Postgres to support high-performance
- · Developed an online patient payment portal, improving customer satisfaction while ensuring HIPAA compliance and security.
- Ensure high-quality, maintainable code through comprehensive unit tests using Jest.
- Work closely with cross-functional teams to deliver impactful features in a SAFe Agile environment, ensuring development aligns with both business and customer needs.

Software Engineer

December 2018 - July 2022

Petsmart, Phoenix, AZ

- Played a key role in the development and successful launch of the e-commerce app using React Native, seamlessly integrating with both Android and iOS platforms.
- Implemented new features and resolved bugs across web and mobile applications for the PetSmart e-commerce and services website, enhancing functionality and boosting user satisfaction.
- Took a leadership role in addressing technical debt, ensuring longterm codebase stability and scalability.
- Assisted in the creation of the PetSmart design system, contributing to consistent and cohesive user interface components across all platforms.

Full Stack Developer

April 2018 - November 2018

STYR Lab, Scottsdale, AZ

- Developed and launched a mobile nutrition and pregnancy tracking app with React Native, designing the UX/UI in a fast-paced startup environment.
- Built a B2B corporate wellness application, delivering innovative wellness solutions for businesses.
- · Collaborated with a small, agile team to ensure timely delivery of high-quality, maintainable code that supported business objectives.
